

HOW TO CLEAN YOUR GLOW OF THE CARIBBEAN JEWELRY

The secret of cleaning your glow of the Caribbean jewelry is a fresh cleaning solution. Dirty cleaning solutions do not properly clean deep inside this proprietary jewelry, and can actually make your jewelry worse than it was before starting the cleaning process. Failure to change the ultrasonic solution using an old or dirty solution may result in a loss of brilliance and a diminished glow in the dark of night. Not to worry. If this happens, it can still be removed by a Jewelry Store with a history of doing quality IN HOUSE JEWELRY REPAIRS. A Jewelry Store of this standard usually has their own bench jeweler with the proper equipment to do your deep cleaning.

You may also send your jewelry to our repair center with a note to clean your jewelry. We have exacting standards and bench jewelers properly trained with the expertise to make your GLOW jewelry look like new again. However there is a modest charge for this service. Please call us at +1 (812) 817-3100 extension 5 for pricing & return service information.

CLEANING SOLUTION RECIPE:

Mix in your ultrasonic:

60% Sudsy (or milky) Ammonia,

10% Mr. Clean with degreaser,

30% Hot water (not boiling),

- You may want to add a couple drops of

Dawn Brand dishwashing liquid but only a few drops to your solution.

CLEANING STEPS:

- After you have mixed your fresh batch of cleaning solution stir the solution until it appears thoroughly mixed.
- Place your Jewelry on a hook & suspend it in your solution keeping your jewelry away from the walls & floor of the ultrasonic.
 - A) Using a coated clothes hanger to make your suspension wire & hook works well, if you do not have a Ultrasonic Rack & hook system
- Leave your jewelry in the Ultrasonic for approximately 10 minutes and remove promptly.
- thoroughly run your GLOW jewelry under the faucet to remove all excess solution.

USE A STEAM CLEANER OR WARM TAP WATER

- If you have access to a steam machine this will completely blow out any remaining debris.

TIP #1) Look for the “clean outs” on the side of your GLOW jewelry. The clean outs may be open decorative areas that create windows to the inside of your proprietary jewelry located on the side panels and backside. These are known as CLEAN OUTS and are designed for steam cleaning to penetrate deep inside your jewelry, removing any remaining oils or debris that were not dislodged by the ultrasonic cleaner.

TIP #2) Sometimes it's necessary to use a soft bristle toothbrush by dipping it into your mixture of fresh cleaning solution and gently jabbing and brushing in between all the small areas of your GLOW jewelry piece. Once done steam clean or thoroughly clean under a faucet using warm water.

FINAL STEP:

Use a soft cloth to gently pat down and dry your Glow Jewelry.

If you have any questions please reach out to the retailer that sold you your GLOW Jewelry or feel free to reach out to our USA or Caribbean office.
